Reasons For Allowance

The prior art does not disclose or fairly suggest a laser energy source with a wand and a scanning head attached to the wand or mounted within the wand, the scanning head having an optical element mounted on a spindle rotatable around a hollow shaft, the optical element rotatable in a plane perpendicular to the plane of the spindle rotation, the scanning head further including a cam slidably mounted on the spindle and rotatable with the spindle and a hinged arm joining the cam to the optical element to rotate the optical element relative to the spindle. Prior art provides for scanning a laser from a handheld unit, such as U.S. Patent 6,626,834 to Dunne et al., however, the prior art does not include an optical element rotatable on a spindle and cam arrangement as provided by the applicant. Dunne et al. use a magnetic coil to effect the scan.
